**ABSTRACT**

Please replace the abstract that appears on page 8 of the specification with the following revised abstract which is submitted on a separate sheet.

## Abstract

For optimizing couplings used until now, ~~the invention provides~~ an arrangement  $[(10)]$  is provided for a coupling of electromagnetic signals from a coaxial cable into a hollow conductor  $[(14)]$ , in which an exciter pin  $[(20)]$  is continued in the hollow conductor from a rear wall  $[(18)]$  of the hollow conductor  $[(14)]$  and is electrically conductively connected with a side wall  $[(24)]$  of the hollow conductor  $[(14)]$ .
